# Spring 2018

EE360T Software Testing (Unique: 15830) EE382C-16 Software Testing (Unique: 16059) MW 9:00 a.m.-10:30 a.m. EER 1.518

#### Instructor

Sarfraz Khurshid EER 7.880 x1-8244

khurshid@ece.utexas.edu

Office hours: Tuesday, Wednesday 10:30am to 11:30am

## Teaching Assistants

Oguz Demir oguz@utexas.com Office hours: TBD

Yuanrui Ren yrren@utexas.edu Office hours: TBD

## Catalog entry

Basic concepts and techniques for testing software and finding bugs. Topics include the testing process, unit, integration and system testing, manual and automatic techniques for generation of test inputs and validation of test outputs, and coverage criteria, and focus on functional testing.

## Prerequisites

Electrical Engineering 422C (or 322C) with a grade of at least C-. Knowledge of Java will be beneficial but is not required; language constructs necessary for this course will be introduced in the class. Students must be able to write correct technical English.

## Description

This course first introduces the basics of software testing theory and practice, and then presents some recently developed techniques for systematically finding bugs in programs and improving their reliability. A NIST report from 2002 estimates that software failures cost the US economy \$59.5 billion dollars annually and over a third of this cost could be saved using a better infrastructure for testing. It is widely accepted that testing currently accounts for more than one half of the cost of software development. Learning the techniques and tools presented in this course is likely to significantly increase the students' productivity as software developers and testers and improve the quality of the code they develop.

## Textbook (recommended)

Introduction to Software Testing by Paul Amman and Jeff Offutt. Cambridge University Press. ISBN: 9781107172012.

## Deliverables and grading

There will be four to six problem sets, and three mid-term exams. In addition, graduate students will work in teams of 2 or 3 students each on a semester long project on designing and building a test automation tool (e.g., to monitor code coverage, to perform symbolic execution, or to perform mutation testing), and give a 15-20 minutes presentation during the last class week as well as submit a written final project report.

For undergraduate students, the problem sets will account for 25%, and the mid-term exams for 75% of the grade.

For graduate students, the problem sets will account for 20%, the mid-term exams for 60%, and the project for 20% of the grade.

The (tentative) dates for the three mid-term exams are: 2/19, 3/26, and 4/30.

#### Lab resources

Students will need to have access to a Java development environment. Additional resources may be required based on particular assignments.

#### Collaboration

Students must solve the problem sets individually and submit their own work. Graduate students working in a team will deliver a co-authored report and presentation.

#### ECE's academic honesty statement

Faculty in the ECE Department are committed to detecting and responding to all instances of scholastic dishonesty and will pursue cases of scholastic dishonesty in accordance with university policy. Scholastic dishonesty, in all its forms, is a blight on our entire academic community. All parties in our community—faculty, staff, and students—are responsible for creating an environment that educates outstanding engineers, and this goal entails excellence in technical skills, self-giving citizenry, an ethical integrity. Industry wants engineers who are competent and fully trustworthy, and both qualities must be developed day by day throughout an entire lifetime. Scholastic dishonesty includes, but is not limited to, cheating, plagiarism, collusion, falsifying academic records, or any act designed to give an unfair academic advantage to the student. The fact that you are in this class as an engineering student is testament to your abilities. Penalties for scholastic dishonesty are severe and can include, but are not limited to, a written reprimand, a zero on the assignment/exam, re-taking the exam in question, an F in the course, or expulsion from the University. Don't jeopardize your career by an act of scholastic dishonesty. Details about academic integrity and what constitutes scholastic dishonesty can be found at the website for the UT Dean of Students Office and the General Information Catalog, Section 11-802.

#### Students with disabilities

Students with disabilities may request appropriate academic accommodations from the Division of Diversity and Community Engagement, Services for Students with Disabilities (Tel: 512-471-6259; online: http://www.utexas.edu/diversity/ddce/ssd/).

# Calendar (tentative)

| Week 1            | 1/17                | Introduction, course overview, Java/JUnit basics                                    |
|-------------------|---------------------|---|
| Week 2            | 1/22                | Graph theory, logic, and discrete math basics                                       |
|                   | 1/24                | Chapter 2 (1): Basic software testing principles and concepts                       |
| Week 3            | 1/29                | Chapter 7 (2): Graph coverage   |
|                   |                     | Criteria  |
|                   | 1/31                | Chapter 7 (2): Graph coverage   |
|                   |                     | Source code   |
| Week 4            | 2/5                 | Chapter 7 (2): Graph coverage   |
|                   |                     | Designs/Specifications  |
|                   | 2/7                 | Chapter 7 (2): Graph coverage   |
|                   |                     | Use cases   |
| Week 5            | 2/12                | Chapter 8 (3): Logic coverage   |
|                   |                     | Criteria  |
|                   | 2/14                | Chapter 8 (3): Logic coverage   |
|                   |                     | Source code   |
| Week 6            | 2/19                | Mid-term Exam 1   |
|                   | 2/21                | Chapter 8 (3): Logic coverage   |
|                   |                     | Specifications/finite-state machines  |
| Week 7            | 2/26                | Chapter 6 (4): Input space partitioning   |
|                   |                     | Input domain modeling   |
|                   | 2/28                | Chapter 6 (4): Input space partitioning   |
|                   | - /                 | Combination strategies criteria and constraints among partitions                    |
| Week 8            | $3/\ 5$             | Chapter 9 (5): Syntax-based Testing   |
|                   | o / =               | Criteria  |
|                   | 3/7                 | Chapter 9 (5): Syntax-based Testing   |
|                   |                     | Program-based and specification-based grammars                                      |
| Week 9            | 2/10                | Spring break  |
| Week 10           | 3/19                | Chapter 9 (5): Syntax-based Testing   |
|                   | 0 /01               | Input space grammars  |
|                   | 3/21                | Chapters 13, 14 (6): Practical considerations                                       |
| <b>33</b> 7 1 11  | 0./00               | Regression testing  |
| Week 11           | 3/26                | Mid-term Exam 2   |
|                   | 3/28                | Chapters 10, 11 (6): Practical considerations                                       |
| W1- 10            | 1/0                 | Test process and test plans   |
| Week 12           | $\frac{4}{2}$       | Implementing test automation tools  |
| Week 13           | $\frac{4/4}{4/9}$   | TBD   |
| week 13           | 4/9                 | Automated test input generation  Combinatorial testing and constraint based testing |
| <b>TX</b> 71- 1.4 | 4/11                | Combinatorial testing and constraint-based testing                                  |
| Week 14           | 4/16                | Symbolic execution  Model checking  |
| Week 15           | 4/18                | Model checking  Declarative models  |
| week 15           | 4/23                | Review  |
| Week 16           | $\frac{4/25}{4/30}$ | Mid-term Exam 3   |
| week 10           | ,                   | Project presentations   |
|                   | 5/ 2                | roject presentations  |
